

The **Grant Module** in Tracking At-A-Glance® (TAAG) allows users to track performance and outcomes for specific grants that have been awarded.

TAAG allows you to:

- Create grant categories (e.g. ROSS grants) to which you can attach specific grants
- Set the program length for the grant from one to five years
- Select countable activities (such as completed assessments, referrals, and employment records) as measures for the grant
- Establish individual goals for each year

This module compares actual outcomes to projected goals and displays the percentage. It has been fully integrated into our interface and provides dynamic reports based on user-defined measures. The report can be viewed in summary or detail mode, and can be exported as an Excel or PDF file.
