

The **Immigration Module** in Tracking At-A-Glace® (TAAG) allows users to capture information pertinent to a client's immigration status.

TAAG tracks:

- Country of origin
- Nationality
- Immigrant Status
- Date, port, and state of entry
- Passport and visa numbers

In addition to the standard layout there are four optional user-defined fields that may be enabled to track agency-specific information. This module has been fully integrated into our interface, making every field available for reports.
