

The **FSS Report** in Tracking At-A-Glance® (TAAG) features a dynamic custom report that *automatically* tracks and reports common services/activities and outcomes based on the referrals, milestones and other relevant data entered into TAAG by your agency. The report features goals that can be set for each reporting year. As a result, the report compares the projected goals to the actual outcomes, and displays the percentage. "Corporate" users who have the highest level of access can easily enter the yearly goals in Customize/FSS Goals for all applicable measures. Once this is done the percentages will be updated on TAAG's FSS Report as data is entered.

The report tracks data relating to the different categories such as Service Coordination, Child Care, Education, Employment, Training, Health, Financial Literacy, Housing and Transportation. The **FSS Report** also contains several filters, including resident demographic data, grant, and date parameters, to provide a more enhanced report, which can easily be printed as well as exported to Excel in seconds.
