

The **Budget Module** in Tracking At-A-Glance® (TAAG) allows users to create a budget based on either the resident's individual or household income.

TAAG:

- Maintains data for all monthly income such as, employment, SSI and TANF
- Maintains data for all monthly expenses such as housing, utilities and medical care
- Auto-calculates disposable income based on monthly income and expenses
- Calculates the hourly income that is needed to maintain the monthly budget based on a pre-determined number of hours per week

This module has been fully integrated into our interface, making every field available for reports.
