

The **Interface Feature** in Tracking At-A-Glance® (TAAG) provides a one-way transfer of information from other software to TAAG.

The interface imports the following client information:

- Details such as name, gender, race, ethnicity, date of birth, primary language, social security number, disability, status, citizenship status, and address
- Household member relationships
- Income according to type such as TANF, SSI or Unemployment
- Escrow amount
- Public Housing Site
- Section 8 Classification

Income and escrow amounts are automatically updated after the initial import. The interface feature also includes a discrepancy log, which compares the information in TAAG to the information in the other software. The discrepancies are highlighted in red when the imported information in TAAG does not match the information in the other software.
